RCRA COMPLIANCE EVALUATION INSPECTION REPORT

SPATZ PAINT INDUSTRIES, INCORPORATED

1601 North Broadway
St. Louis, Missouri 63102
Telephone Number: (314) 241-0830 or (800) 325 2661

EPA I.D. NUMBER: MOD001939735

MISSOURI I.D. NUMBER: 01777

INTRODUCTION

The Air and Waste Management (ARWM) Division requested the Environmental Monitoring and Compliance (EMCM) Branch, Field Investigations (FINV) Section to perform an inspection of the captioned facility for determining the status of compliance with the Resource Conservation and Recovery Act (RCRA) as implemented by the Missouri Hazardous Waste Management Law and Rules and administered by the Missouri Department of Natural Resources.

The Missouri Department of Natural Resources (MDNR) was notified of the impending inspection and invited to participate. The invitation was declined, but during a pre-inspection meeting at the St. Louis Regional Office, comments were made pertaining to MDNR experience and copies of file documents were provided.

The inspection was performed, per the authority of RCRA §3007, on June 7, 1984, beginning at 8:15 a.m. and concluding at 12:45 p.m. Since the entire inspection was conducted indoors, weather conditions had no effect on the performance of the inspection.

PARTICIPANTS

U.S. Environmental Protection Agency (EPA):
Harry U. Gilmer, Chemical Engineer, Inspector

Spatz Paint Industries, Incorporated (Spatz):
Michael E. Spatz, President
Jim Livingston, Plant Superintendent
Gene Speight, Controller

Upon arrival at Spatz, the inspector requested an audience with Mr. Howard Jerome, Vice President, Manufacturing. Mr. Jerome was attending an industry conference in Atlanta; therefore, Mr. Michael Spatz, President, responded to the request. Credentials were presented and the purpose and procedure of the inspection was explained. Mr. Spatz informed the inspector that Mr. Jerome maintained all records, conducted all correspondence and managed the Hazardous Waste Program. In his opinion, the inspection might progress at a fast pace and be assured of completeness if the inspection could be performed with Mr. Jerome's participation; however, Mr. Jim Livingston, Plant Superintendent, would be the company's representative. Mr. Spatz did not further participate until the review meeting.

Mr. Jim Livingston was the principal contact. He provided requested copies of documents from Mr. Jerome's file, answered all inquiries and provided commentary during a tour of the facility.

Mr. Gene Speight, Controller, provided a statement of Earnings and Retained Earnings for the years 1982 and 1983 ending November 30.

PROCESS DESCRIPTION

Spatz Paint Industries, Incorporated employs 20 people to perform all plant requirements. The plant operates 8 hours/day, 5 days/week, 51 weeks/year. The facility receives pigments, solvents, resins, dryers, anti-settling agents, etc. which are blended to specific formulations. Each batch is ground, thinned and "shaded" (for color correction). The batch volume varies according to the order and will range from approximately 600 gallons to a few quarts. The batch is packaged and then warehoused before shipment.

Solvents are incorporated into the mix so as to clean the blending and grinding equipment. The final screening and filling equipment is separately cleaned. It is this process which generates the waste solvent. The waste solvent from these cleaning activities is accumulated, shipped to a recycler who then returns the clean solvent to Spatz for reuse.

Establishments primarily engaged in the manufacture of paint, varnishes, and lacquers have the Standard Industrial Classification (SIC) industry number 2851.

FINDINGS AND OBSERVATIONS

The inspection began with the examination of records and correspondence which are kept in Mr. Jerome's office. Copies of manifests are attached to this report. The current transporter and TSD facility is Superior Solvents and Chemicals (SSC), MOD079910600. All waste transported by SSC has been designated as D001. However, prior to 5/18/83, the waste was designated as F003. Based upon the analysis of the returned solvent, the mixture of the waste appears to be D001 ~ 21%, F003 ~ 60%, and F005 ~ 18%. Mr. Jerome reported to the MDNR on May 14, 1984, that the waste paint liquid shipped during 1983 was 19,030 gallons or approximately 5,235 kg per month using an average 7.27 lbs. per gallon. The manifests were correctly completed, signed by all parties and returned to the generator within one day.

The permits issued by the City of St. Louis for the storage of flammable liquids will expire at the end of March. These are attached. The City Fire Marshal will perform an inspection during the week ending June 15. I have requested a copy of that inspection report and the permit.

A copy of the Contingency Plan is attached. Documentation of contacts with local authorities was not provided by Mr. Livingston although he stated the contacts had been made.

Mr. Livingston was unable to find the Personnel Training plan, but, Mr. Jerome, during a telephone conversation on June 11, stated that a plan had been completed and a copy would be mailed to the inspector.

The Spatz facility is a single three-story building with a basement. Most bulk liquids, including the recovered solvent, are stored in tanks in the basement. Liquids are pumped to the proper point of use. The basement was clean, well illuminated and free of "solvent" or "chemical" odors. This was indicative of leak-free storage.

The blending floor is the third floor. Each item is precisely weighed and blended by one of three mixer/blenders. Part of the solvents are added to reduce the viscosity so that blending can occur. The vat is washed with the remaining solvent which is incorporated in the paint product. The blending may continue in the 5 "sand" mills or 2 ball mills to achieve a smooth homogeneous product. If these grinders are used, then part of the solvents will be used to remove the paint from the grinder and that material is incorporated in the paint product.

The paint is filtered through a fine mesh stainless steel screen during the filling of containers. The cleaning of the components of the filling equipment generates the waste paint solvents. This waste is accumulated in steel drums. The drums were properly labeled and dated. There were 3 full drums, dated June 7, and 3 drums accumulating the waste. The drums containing the waste remain in the area of accumulation, the center of the building, because there is no other area greater than 50' from the property line. All of the waste remains within the building, on the second floor and in the center of the building. Shipment of the accumulated waste is done biweekly. The accumulation is approximately 20 drums. The Fire Marshal has given tacit approval to the storage area by issuing a permit for the storage of flammable liquids. There is no letter giving approval.

Although the floors are crowded due to the size and configuration of the building, the aisles seemed adequate. Fire extinguishers, sprinkler system and "No Smoking" signs were evident and adequate.

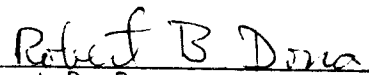

During the review of the inspection, Mr. Gene Speight, Controller, provided a "Statement of Earnings and Retained Earnings" for the years 1982 and 1983 ending November 30, which is attached.

RECOMMENDATION

The waste be changed from D001 to F003.

324 EAST ELEVENTH STREET
KANSAS CITY, MISSOURI - 64106

JAN 6 1984

CERTIFIED MAIL
RETURN RECEIPT REQUESTED

Mr. Howard Jerome
Technical Director
Spatz Paint Industries, Inc.
1601 North Broadway
St. Louis, Missouri 63102

EPA I.D. Number MOD001939735

Dear Mr. Jerome:

On September 20, 1983, the Missouri Department of Natural Resources (MDNR) referred to the U.S. Environmental Protection Agency (EPA) information concerning on-going violations of federal and state hazardous waste regulations at Spatz Paint Industries, Inc.. This referral was initiated both by the inability of Spatz Paint to store ignitable hazardous waste greater than 50 feet from the plant property boundary, due to the physical configuration of plant property, in violation of 40 C.F.R. §262.34(a)(1), §265.176, and 10 CSR 25-7.050(3)(G), and the inability of MDNR to grant a variance to state regulations for such a situation.

Based on EPA's review of this situation we are requesting that, within 30 days of receipt of this letter, Spatz Paint have the hazardous waste storage area inspected by a city fire marshall for compliance with local fire codes and ordinances. This inspection should be geared towards compliance with local fire codes taking into account the maximum quantity of ignitable hazardous waste to be stored at this site at any one time in the future. If the fire marshall approves such storage at this location, Spatz Paint should submit to EPA a letter signed by the city indicating their approval of such storage. If the fire marshall does not approve such storage then Spatz Paint should either, determine at what location and what quantity of hazardous waste the fire marshall will approve storage of this waste or if this is not possible construct a storage facility to store this waste that will insure compliance with local fire codes.

Handwritten signature:
Paul S. [unclear]
[unclear]

Our review of the letter to you from MDNR, dated June 27, 1983, and your response to this letter dated July 18, 1983, indicates that the documentation requested by MDNR was not submitted as requested. It is requested that within 30 days of receipt of this letter, the following information be submitted both to MDNR and EPA:

- (1) Information required by 10 CSR 25-7.011 (6)^{p. 80}(B)(12) and (13) concerning personnel training and records of that training; and
- (2) A copy of the facility contingency plan, as required by 10 CSR 25-7.011^{p. 77}(5).

Finally we have, based on the MDNR inspection at Spatz Paint, reassessed this facility's status in the Federal Resource Conservation and Recovery Act (RCRA) system. Although the xylene that is generated is recycled, this waste is not exempt from regulation if it is stored on-site or transported prior to storage or re-cycle. Please refer to 40 C.F.R. §261.6(b) for this requirement. Based on this we are rescinding our status change letter dated June 17, 1983, and re-classifying Spatz Paint as a hazardous waste generator.

Please submit all requested information to David Doyle, Air and Waste Compliance Branch, U.S. EPA, 324 East Eleventh Street, Kansas City, Missouri 64106.

Failure to respond to this request in a timely manner could lead to further enforcement action pursuant to Section 3008 of RCRA.

If you have any questions concerning this matter, please call Mr. Doyle at 816/374-7133.

Sincerely yours,

William C. Sprack (Spracklin)

EPA I.D. No. MOD001939735

Dear Mr. Jerome:

LETTER OF WARNING

On January 6, 1984, the U.S. Environmental Protection Agency (EPA) sent you a letter by certified mail, which was received by Spatz Paint Industries, Inc., on January 12, 1984 (copy attached). This letter requested, within 30 days of receipt of the letter, that Spatz Paint Industries, Inc., submit documentation concerning the compliance status of this facility with federal and state hazardous waste handling requirements. As of this date EPA has received no reply to our letter from Spatz Paint Industries, Inc.

This letter is to once again request, within 10 days of receipt of this letter, that Spatz Paint Industries, Inc., adequately respond to the requests in EPA's letter of January 6, 1984.

Failure to respond to this request in a timely manner could lead to EPA initiating an enforcement action pursuant to Section 3008 of the Resource Conservation and Recovery Act (RCRA).

If you have any questions concerning this matter, please call David Doyle, of my staff at 816/374-7133.

Sincerely yours,

Carl M. Wagoner

Dear Mr. Doyle:

I have attached a "Contingency Plan" which I hope meets with your approval. Please advise.

The St. Louis Fire Department has a copy of our floor plan. They make regular inspections to assure proper housekeeping. In addition we have a union/managment safety inspection each month to insure that all safety equipment is in working order and that good housekeeping practices are maintained.

Our building is protected for fire and burglary by Wells-Fargo and direct lines are maintained to both the police and fire departments.

Our building is completely sprinklered. All wiring is modern and explosion proof.

Sincerely,

Howard Jerome

SPATZ PAINT INDUSTRIES CONTINGENCY PLAN

1. Primary Emergency Coordinator

Howard Jerome
[REDACTED]

Ex. 6 PII

Emergency Coordinator

James Livingston
[REDACTED]

Ex. 6 PII

2. In the event of an emergency situation, all personnel will be notified by in-plant intercom system. An immediate assessment will be made as to the procedure to be followed in handling leaks or spills. (See par. 4 below)

In the event of fire, a sprinkler release will automatically cause klaxons to sound and both fire and police departments will automatically be notified. All employees are to leave the building via the nearest exit and assemble in the company parking lot. Should the fire be of a minor nature, (no sprinkler release) the following steps should be taken:

- a. notify emergency coordinators by loud speaker (they will notify the fire department)
 - b. get the nearest fire extinguisher and start fire fighting procedures.
3. All working areas are adequately provided with ABC type fire extinguishers. Employees have been trained in the use of this equipment and should familiarize themselves with extinguisher location. (see print attached)
4. Absorbent material is provided on each floor to handle spills or leaks. An emergency coordinator will arrange for disposal of contaminated waste material.
5. Employees will meet once each quarter for an "on the job" training session. This program will include a discussion of emergency equipment, the use and location of communication equipment, response to emergencies and the possible shutdown of operations.

PERSONNEL INVOLVED IN WASTE MANAGEMENT

Howard Jerome -- Operations Manager/Technical Director

Employed 37 years in the coatings industry. Responsible for overall plant and laboratory operation. Originate hazardous waste manifests and maintain permanent records. Advise personnel of EPA regulations.

James F. Livingston -- Plant Superintendent

Employed 28 years in the coatings industry. Directly oversees manufacturing and shipping. Reports to Operations Manager. Arranges for safe storage and housekeeping of waste solvent.

Cecil Powell, Jr. -- Shipping/Receiving Clerk

Employed 17 years in present position. Directly responsible for receiving and shipping of all materials. Reports directly to Plant Superintendent. Arranges for proper labeling of waste solvent and records information on each manifest.

RE: Biennial Generator Report

Dear Generator of Hazardous Waste:

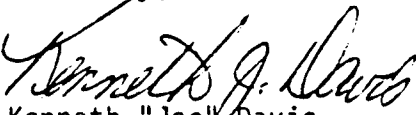

The Missouri Department of Natural Resources (DNR) has been authorized by the United States Environmental Protection Agency (U.S. EPA) to administer the EPA Biennial Report as required by 40 CFR section 262.41. Missouri's equivalent reporting requirements are the quarterly manifest report required in subsection 10 CSR 25-5.010(4)(G) of the Missouri Hazardous Waste Management Regulations.

The department has matched computerized manifest files with a list of generators supplied by the U.S. EPA. Your firm, according to our files, either did not manifest any hazardous waste off-site during 1983 or failed to submit a quarterly report. If your firm did not manifest hazardous waste during 1983 please sign the enclosed certification form and return to this office by June 1, 1984.

If your firm did manifest hazardous waste during 1983 but failed to submit a quarterly report, you must send all manifests from all previous shipments to the department by June 1, 1984. You must include the Missouri generator number, the Missouri waste I.D. number and the shipment number on each manifest. Also if you manifested waste during 1983, you should request a U.S. EPA generator biennial report by calling the number below.

If there are questions concerning this report, please feel free to contact Joe Davis at 314-751-3241.

Sincerely,

Kenneth "Joe" Davis
Environmental Specialist

Dear Mr. Davis:

In response to your request, a summary of our 1983 manifests indicates we shipped 19,030 gallons of waste paint liquid. Copies of manifests have been sent to your department following each shipment.

Sincerely,

Howard Jerome
Operations Manager

Attention: Environmental Affairs Dept.

Dear Sirs:

It has come to my attention that your company has failed to complete the State of Illinois Special Waste Hauling Manifest. In specific, it has been noted that, on manifest(s) number 0707522, the USEPA Hazardous Waste Identification Numbers have been omitted.

The USEPA hazardous waste number must be designated on the form in such a manner as to insure compliance with 35 IL Administrative Code: Part 721 or 40 CFR 261 - Identification and Listing of Hazardous Waste.

Should this Agency receive manifests in the future wherein RCRA and/or State information is omitted, such manifests will be referred to the Division's Compliance Assurance Unit for follow-up.

This Agency expects your facility to insure that future omissions will not occur.

Sincerely,

Stephen A. Colantino, Manager
Manifest Sub-Unit
